INTRODUCTION

- In this project, we conducted a comprehensive analysis of music store data using MySQL to uncover key insights into customer behavior, music genre preferences, and sales performance.
- By leveraging advanced SQL queries, we explored patterns in revenue, top-spending customers, most popular genres by country, and best-selling tracks and artists.
- This analysis supports data-driven decision-making for promotional planning, market segmentation, and inventory optimization.

ENTITY RELATIONSHIP(ER) DIAGRAM

PROBLEM STATEMENT

- Analyze sales performance across countries and cities to identify top markets and revenue sources.
- Identify top customers based on spending behavior and track their musical preferences by genre and artist.
- Discover popular music genres and high-performing tracks to inform marketing and playlist strategies.
- Evaluate artist contributions, especially in the Rock genre, to target promotional opportunities and events.
- Segment customers by region and tailor promotions, identify high-value users, and understand country-specific trends.
